CS50.ai 🦆 ♥♥♥♥♥

ddb

Quack. I am CS50's duck debugger (ddb), an experimental AI for [rubberducking](#). Quack quack. My replies might not always be accurate, so always think critically and let me know if you think that I've erred. Conversations are logged for debugging's sake. Quack quack quack.

you

Hullo

ddb

Hello! How can I assist you with CS50 today?

you

Can i use a placeholder for a route in a jinja template for example:
<form action={{ placeholder }} class="form-item">
<button class="dashboard-btn" type="submit">General</button>
</form>

ddb

Yes, you can use placeholders in Jinja templates. However, you need to make sure that the placeholder is defined in the context you're rendering the template with. For example, in your Flask route, you might have something like this:

```python
@app.route('/some_route')
def some_route():
    placeholder = '/another_route'
    return render_template('template.html', placeholder=placeholder)
```

In this case, `placeholder` would be replaced with the string `'/another_route'` in your template.
